DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on September 8, 2005 has been entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 9 is rejected under 35 U.S.C. 102(e) as being anticipated by US Patent 6,472,317 issued to Wang et al. (hereinafter, Wang).

Wang teaches forming a plasma from a mixture of N_2 , H_2 and $C_xH_yF_z$ to anisotropically etch an interlayer insulating film composed of an organic-inorganic hybrid material, such as HSQ and BCB. See column 5, lines 36-50; column 6, lines 5-24 and 50-54.

Application/Control Number: 10/643,896

Art Unit: 1763

Claims 9 and 10 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent 6,168,726 issued to Li et al. (hereinafter, Li).

Li teaches the anisotropic plasma etching of organo-silane films. Li teaches generating a plasma from an oxygen -free gas mixture comprising a fluorohydrocarbon, N_2 and Ar. See column 6, line 34 – 43; column 12, line 66 – column 13, line 2.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 3-6, 9 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sato in JP 10-268526 (hereinafter, Sato).

Sato teaches anisotropically etching an organic-inorganic composite film. Sato teaches the plasma source gas may comprise NF3, F2 or CHF3. Sato also teaches that at least one of N2 H2 and Ar may be added. See paragraphs [0050], [0060], [0084] and [0088].

Sato does not explicitly teach a specific mixtures being claimed.

It would have been obvious to one skilled in the art to use a plasma gas of N2/F2/H2 or NF3/H2 or CHF3/N2 because the teaching of Sato encompasses each of these compositions. It would also be obvious to add Ar to each of the se composition s because Sato teaches that Ar may be added.

Application/Control Number: 10/643,896

Art Unit: 1763

Allowable Subject Matter

Claims 7 and 8 are allowed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Allan Olsen whose telephone number is 571-272-1441. The examiner can normally be reached on M-F 1-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Parviz Hassanzadeh can be reached on 571-272-1435. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
